

# Bedienungsanweisung

# Backwaren- / Sahneklimakühlschrank NC41PII

[Art. 474600400611]

# Wir gratulieren Ihnen zum Erwerb unseres Geräts!

Die Arbeit ist einfacher aufgrund der intuitiven Graphik der Benutzerschnittstelle, entwickelt zur Vereinfachung des Zugangs zu den Funktionen, die so dargestellt werden, dass sie sofort gefunden werden, um die Interaktion zwischen Benutzer und Gerät zu verbessern.

In einer einzigen Maschine ein Konzentrat von Technologie, das es gestattet, für eine bessere Effizienz in der Küche verschiedene komplementäre Aktivitäten auszuführen.

Das vorliegende Handbuch hat den Zweck, alle Informationen für die richtige Benutzung des Geräts sowie eine angemessene Wartung zu liefern.

Vor allen Eingriffen müssen die enthaltenen Anweisungen aufmerksam gelesen werden, da sie unverzichtbare Angaben zur Sicherheit des Geräts enthalten.

Bei Zweckentfremdung des Produkts übernimmt der Hersteller keiner Haftung. Sprache der Originalversion: Italienisch. Der Hersteller haftet nicht für eventuelle Übersetzungsfehler. DIE Vervielfältigung des vorliegenden Handbuches - auch auszugsweise- ist untersagt.

# SICHERHEITSHINWEISE

# **Sicherheitshinweise zur Benutzung**

- Eine Benutzung und Reinigung, die von den Angaben im vorliegenden Handbuch abweichen, sind als Zweckentfremdung anzusehen und können zu Schäden, Verletzungen und tödlichen Unfällen führen; sie führen zum Verfall des Gewährleistungsanspruches und entbinden den Hersteller von jeglicher Haftung.
- Lesen Sie vor der Benutzung des Geräts aufmerksam das vorliegenden Handbuch und bewahren sie es auf, damit es von den verschiedenen Bediener in der Zukunft konsultiert werden kann.
- Übergeben Sie das Handbuch im Fall der Abtretung des Gerätes an den neuen Benutzer.
- Die Benutzung ist ausschließlich geeignetem und geschultem Personal vorbehalten, das sich periodisch weiterbilden muss.
- Nähern Sie sich den elektrischen Bauteilen nicht mit nassen Händen oder barfuß an.
- Es ist absolut untersagt, Eingriffe oder Abänderungen an den Sicherheitsvorrichtungen vorzunehmen (Schutzgitter, Gefahrenaufkleber usw.). Der Hersteller übernimmt keinerlei Haftung, falls die vorausgehenden Anweisungen nicht beachtet werden.
- Stecken Sie keine Schraubenzieher oder sonstige Gegenstände durch die Schutzvorrichtungen (Schutzvorrichtungen von Gebläsen, Verdampfern usw.).
- Verstopfen Sie für den ordnungsgemäßen Betrieb von Kompressor und Verdampfer nie die Lüftungsöffnungen.
- Verwenden Sie im Brandfall kein Wasser, verwenden Sie einen CO<sub>2</sub>-Löscher und kühlen Sie so schnell wie den Bereich des Motorraums.

# Ordnungsgemäße Verwendung des Geräts

- Dieses Gerät gilt als lebensmittelverarbeitende Maschine (EU-Verordnung Nr. 1935/2004) und des ist für die Verarbeitung von Lebensmitteln in industriellen Großküchen bestimmt. Es ist nicht geeignet für die Konservierung von pharmazeutischen sowie chemischen Produkten oder sonstigen Non-Food-Produkten.
- Zur Erzielung der bestmöglichen Leistungen des Geräts müssen die folgenden Anweisungen beachtet werden:
  - Stellen Sie keine warmen Lebensmittel oder nicht abgedeckte Flüssigkeiten, lebende Tiere oder korrosive Produkte in das Gerät.
  - Verpacken oder schützen Sie die Lebensmittel auf sonstige Weise, vor allem, falls sie Aromen oder Gewürze enthalten.
  - Lagern Sie die Vorräte so im Gerät, dass die Zirkulation der Luft nicht behindert wird, vermeiden Sie es, Papier, Kartons, Schneidebretter usw. auf die Gitter zu legen, die die Zirkulation der Luft behindern.
  - Vermeiden Sie so weit wie mögliches das häufige und längere Öffnen der Tür/Türen.
  - Warten Sie nach dem Öffnen der Tür einige Momente, bevor Sie sie erneut öffnen.
  - Ordnen Sie die Lebensmittel nach und nach von unten nach oben an und entnehmen Sie sie von oben nach unten.
- Die Kühlgeräte wurden mit den entsprechenden Maßnahmen gefertigt und entwickelt, um die Sicherheit und die Gesundheit des Benutzer zu gewährleisten und sie weisen keine gefährlichen scharfen Kanten oder überstehenden Bauteile auf. Ihre Stabilität ist auch bei offenen Türen gewährleistet, es ist jedoch untersagt, sich an die Türen zu hängen.
- Die Nichtbeachtung dieser Vorschriften kann zu Schäden sowie auch tödlichen Verletzungen führen und führt zum Verfall des Gewährleistungsanspruches.

# Bei Funktionsstörungen des Geräts...

- Unterbrechen Sie die Stromversorgung und die Wasserzufuhr und wenden Sie sich an den Vertragskundendienst des Herstellers, falls das Gerät nicht funktioniert oder falls Sie funktionelle oder strukturelle Veränderungen feststellen; versuchen Sie nicht, selbst Reparaturen auszuführen. Wir empfehlen die Verwendung von Originalersatzteilen. Der Hersteller haftet nicht, falls Ersatzteile von Drittanbietern verwendet werden.
- Um sicherzustellen, dass sich das Gerät im perfektem Nutzungs- und Sicherheitszustand befindet, empfehlen wir, es zumindest einmal jährlich durch den Vertragskundendienst warten zu lassen.

# Risiken im Zusammenhang mit der Benutzung des Geräts

- RISIKEN DURCH DIE BEWEGUNG AUF RÄDERN: Achten Sie bei den Bewegungen darauf, das Gerät nicht zu schnell zu schieben, falls es auf Rädern montiert ist, um zu vermeiden, dass es umkippt und beschädigt wird; achten Sie auch eventuelle Unebenheiten der Gleitflächen. Das mit Rädern ausgestattete gerät kann nicht nivelliert werden und daher muss sichergestellt werden, dass die Aufstellfläche vollkommen horizontal und eben ist. Blockieren Sie die Räder immer mit den entsprechenden Sperren.
- RISIKEN DURCH UMKIPPEN: Der Schrank muss nach dem Aufstellen mit entsprechenden Bügeln blockiert werden, da das Gewicht der Tür das Gleichgewicht nach vorne verlagert, was zu einer Kippgefahr führt. Falls der Schrank auf Rädern aufgestellt wird, ist es nicht möglich, ihn zu verankern, und daher ist beim Öffnen der Tür die **größtmögliche Vorsicht** erforderlich, vor allem bei leerem Gerät.
- RISIKEN DURCH BEWEGLICHE ELEMENTE: Das einzige bewegliche Element ist das Gebläse, es weist jedoch kein Risiko auf, da es durch ein mit Schrauben befestigtes Schutzgitter geschützt ist.
- RISIKEN DURCH HOHE/NIEDRIGE TEMPERATUREN: In der Nähe der Gefahrenbereiche durch hohe/niedrige Temperaturen wurden Aufkleber mit den Hinweisen "GEFAHR TEMPERATUR" angebracht.
- RISIKEN DURCH ELEKTRISCHE ENERGIE: Die elektrischen Risiken wurden durch elektrische Anlage gemäß den Bestimmungen der Norm CEI EN 60335-1 gelöst. Aufkleber mit dem Hinweis "HOCHSPANNUNG" weisen eine die elektrischen Gefahrenbereiche hin.
- Geräuschpegel unter 70 dB
- Darauf achten, dass beim Schließen der Tür die Finger nicht gequetscht werden.
- Wenn die Tür offen ist, steht das Armaturenbrett über die Abmessungen der Maschine über; aus diesem Grund muss darauf geachtet werden, nicht mit dem Kopf anzustoßen.
- Der Griff steht über die Abmessungen der Maschine über; darauf achten, eine mögliches Anstoßen zu vermeiden.

# Richtiges beladen des Geräts

Die Speisen werden in einer einzigen Schicht in Behältern angeordnet:

- offen;
- · lebensmittelgeeignet;
- widerstandsfähig gegen niedrige Temperaturen;

Die Behälter müssen gleichmäßig im Inneren der Kammer verteilt werden.

Ein korrekte Positionierung der Behälter gestattet die frei Zirkulation der Luft im Inneren der Zelle: Verstopfen Sie die Lüftungsgebläse nicht und vermeiden Sie die Überladung des Geräts.

# 

# **Blockieren der Tür**

Die Öffnung der Tür kann mit dem Schloss auf dem Armaturenbrett blockiert werden.

# **Cloud-Verbindung**

Wenn der Kunde ein Cloud-Abonnement beantragt hat, wird die Maschine mit einem Ethernet-Kabel mit dem Netz verbunden. Der Anschluss befindet sich auf der Karte im hinteren Teil des Armaturenbretts.

Wir empfehlen, den Display nicht mit Kellen oder sonstigen Gegenständen zu berühren, sondern nur mit den Händen oder eventuellen Stiften für Touchscreens.

# Normale Reinigung des Gerätes

VOR DER DURCHFÜHRUNG ALLER WARTUNGSEIN-GRIFFE MUSS DIE STROMVERSORGUNG DES GERÄTS UNTERBROCHEN WERDEN; BENUTZEN SIE AUSSER-DEM GEEIGNETE PERSÖNLICHE SCHUTZAUSSTATTUNGEN (Z. B. HANDSCHUHE USW.).

DER BENUTZER DARF AUSSCHLIESSLICH ORDENTLI-CHE WARTUNGSARBEITEN (REINIGUNGSARBEITEN) AUSFÜHREN. BITTE WENDEN SIE SICH FÜR AUSSER-ORDENTLICHE WARTUNGSARBEITEN AN DEN VERTRAGSKUN-DENDIENST UND BEANTRAGEN SIE EINEN EINGRIFF EINES TECHNIKERS.

DER GEWÄHRLEISTUNGSANSPRUCH VERFÄLLT IM FALL VON SCHÄDEN, DIE AUF UNTERLASSENE ODER FALSCHE WARTUNG ZURÜCKZUFÜHREN SIND (Z. B. VERWENDUNG UNGEEIGNETER REINIGUNGSMITTEL).

BEI DER DURCHFÜHRUNG VON WARTUNGS- UND REINIGUNGSARBEITEN AM MOTOR AUF HEISSE BAU-TEILE ACHTEN.

AUF SCHARFE KANTEN AN DEN FÖRDERERN, DER KONDENSATORBATTERIE (DIE RIPPEN WERDEN VOM FILTER GESCHÜTZT), AN DER BASIS DER MOTORHAL-TERUNG (BOHRUNGEN) UND AN DEN LANGLÖCHERN DES AR-

MATURENBRETTS ACHTEN.

Zur Reinigung von Komponenten oder Zubehörteilen dürfen NICHT verwendet werden:

- Scheuernde Reinigungsmittel in Pulverform;
- Aggressive oder korrosive Reinigungsmittel (z. B. Salzsäure oder Schwefelsäure, Ätznatron usw.). Achtung! Verwenden Sie diese Substanzen auch nicht zur Reinigung des Bodenbelags unter dem Gerät;
- Scheuernde oder spitze Werkzeuge (z. B. Scheuerschwämme, Schaber, Stahlbürsten usw.);
- Dampf- oder Hochdruckreiniger.

Reinigen Sie vor der ersten Benutzung die bleche und die Kammer mit einem mit warmer Seifenlaufe angefeuchtetem Tuch; anschließend nachspülen und abtrocknen. Zur Beseitigung von Arbeitsrückstände das Gerät ca. 30 Minuten leer in Betrieb nehmen.

# Reinigung der externen Stahlflächen

Ein dem warmer Seifenlauge oder spezifischen Produkten für Stahl getränktes Tuch verwendenacciaio. Anschließend nachspülen und abtrocknen.

# Reinigung der Kammer des Geräts

Reinigen Sie die Kammer des Geräts täglich, um die hohen Hygiene- und Leistungsniveaus des Geräts aufrecht zu erhalten. Zum Reinigen stets ein mit warmer Seifenlauge angefeuchtetes Tuch verwenden, anschließend nachspülen und trocknen.

rev 0 - 02/2019

# **Reinigung des Touchscreens**

Ein mit <u>ein wenig</u> spezifischem Produkt für Bildschirme getränktes Tuch verwenden und die Anweisungen des des Herstellers des Reinigungsmittels beachten.

Sprühen Sie nicht zu viel Produkt auf, um Infiltrationen zu vermeiden, die das Display beschädigen könnten.

# Reinigung der Schlitze und Gitter/Schwamm

Halten Sie die Schlitze durch häufige Reinigung mit einem Staubsauger oder einem Pinsel frei von Verkrustungen und Staub. Wir empfehlen, das frontale Paneel in regelmäßigen Abständen

wir emplehlen, das frontale Paneer in regelmasigen Abstanden anzuheben und den Staub abzusaugen, der sich auf dem Gebläse des Kondensators angesammelt hat. Durch Anheben des Paneels besteht auch Zugang zur Kondenswasserauffangschale, die sich zwischen Kondensator und Kompressor befindet. Darin fungiert ein Metallgitter "GM" als Schwamm, der das Wasser aufnimmt, die Austauschfläche vergrößert und die Verdampfung des Kondenswassers vereinfacht; dieses "Gitter/Schwamm" muss regelmäßig herausgenommen und mit Wasser und Seife oder in der Spülmaschine gereinigt werden.

# **Reinigung des Filters**

Auf der rechten Seite des Kondensators befindet sich ein Filter "FL", der von Metallklammern in Position gehalten wird. In regelmäßigen Abständen entfernen und mit Wasser und Seife reinigen. Nach der vollständigen Trocknung wieder in Position einsetzen. Die Maschine nicht ohne montierten Filter benutzen.

# Nichtbenutzungszeiten

Unterbrechen Sie während längerer Nichtbenutzung die Stromversorgung und die Wasserzufuhr (falls vorhanden). Schützen Sie die externen Bauteile aus Stahl des Geräts, indem Sie sie mit einem Öl oder Vaseline angefeuchtetem Tuch abreiben.

Lassen Sie die Tür angelehnt, damit die Luft zirkulieren kann. Gehen Sie vor der erneuten Benutzung wie folgt vor:

- nehmen Sie eine sorgfältige Reinigung des Geräts und der Zubehörteile vor;
- schließen Sie das Gerät wieder an die Stromversorgung und die Wasserzufuhr an (falls vorhanden);
- unterziehen Sie das Gerät vor der erneuten Benutzung einer Kontrolle;
- nehmen Sie das Gerät für zumindest 60 Minuten ohne Lebensmittel in Betrieb.

Um sicherzustellen, dass sich das Gerät im perfektem Nutzungs- und Sicherheitszustand befindet, empfehlen wir, es zumindest einmal jährlich durch den Vertragskundendienst warten zu lassen.

# **TOUCH-TASTEN**

Nachfolgend finden Sie eine Beschreibung der Funktionsweise der Touch-Tasten:

Tasten	Tippen und loslassen
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~	Zugang zur temperaturkurve des datewloggers
-`Ò	Einschalten/Schalten Sie das Zellenlicht aus
	Zugang zum Menu
Q	Aktivieren/Deaktivieren Sie den Energiesparmodus

# **VERWENDUNG DES CONTROLLERS**

# **ON/OFF** Controllers

Um den Controller ein-oder auszuschalten, führen Sie die folgenden Schritte aus:

#### Einschalten

# Abschalten

**HINWEIS:** Ein/Ausschalten bezieht sich auf den Übergang von STAND-BY auf ON und umgekehrt. Wenn sich der Controller im Standby-Modus befindet, wird durch Berühren der Taste & das Licht eingeschaltet.

#### Auf das Menü zugreifen und es verwenden

Über die Menütaste auf dem HOME-Bildschirm können Sie auf die wichtigsten Funktionen zur Konfiguration und Verwaltung des Controllers zugreifen. Um zur nächsten Seite zu gelangen, tippen 🖬 auf 📭.

Über das Menü können Sie auf folgende Funktionen zugreifen:

- Schalten Sie das Gerät aus;
- Manuelles Abtauen starten;
- Aktive Alarme und/oder Ereignisverlauf anzeigen;
- Greifen Sie auf die Listen der zu konservierenden Lebensmittel zu (Voreinstellungen und Favoriten).;
- Greifen Sie auf spezielle Zyklen zu;
- Greifen Sie auf allgemeine Einstellungen, erweiterte Funktionen und Parameterverwaltung zu;
- Servicemenü

# DATENVERLAUF

Im Datenverlauf können Sie Folgendes anzeigen:

- Verlauf des Kompressorzählers;
- Abtauverlauf;
- Geschichte der Türöffnung;
- Historischer Aufbau;
- Löschen des Datenverlaufs

#### Verlauf des Kompressorzählers

- Gesamtstunden Maschinenbetrieb;
- Gesamtbetriebsstunden des Kompressors;
- Durchschnittliche Kompressorzeit ON;
- Durchschnittliche Kompressorzeit OFF;
- Täglicher Zündprozentsatz;
- Prozentsatz des Kompressors der letzten Stunde.

#### Abtauverlauf

- Letzte 30 Abtauberichte:
- Auftautyp;
- Datum und Uhrzeit des Abtaubeginns;
- Auftaudauer.

# Geschichte der Türöffnung

- Melden Sie die letzten 30 Türöffnungen:
- Gesamtzahl der Öffnungen;
- Anzahl der Türöffnungen, die einen Alarm wegen offener Tür verursacht haben;
- Gesamtzeit der Türöffnungen.

#### Konfiguration HACCP. CSV FILE

Aktivieren/Deaktivieren Sie die Speicherung von Daten im Verlauf.

#### Löschen des Verlaufs

• Löschen Sie eine oder mehrere Datengruppen einzeln oder löschen Sie alle Daten.

# ALLGEMEINE EINSTELLUNGEN

Über die allgemeinen Einstellungen des Controllers ist dies möglich:

- Datum und Uhrzeit ändern;
- Ändern Sie die Sprache;
- Weisen Sie der Einheit einen Namen zu;
- Fügen Sie eine Begrüßungsseite hinzu;
- Löschen Sie die Liste Ihrer Lieblingsspeisen.

# Datum und Uhrzeit ändern

10:38 20/01/21	1 2 3 4 5 8 7 8 9 6 1 (1 (1	10:38 AM 01/20/21	1 2 3 4 5 8 7 8 5 ⊘ ∰ U ©

Sie können zwischen dem Format wählen, indem Sie auf die Schaltfläche tippen 👹 :

- Europa (EU);
- Vereinigte Staaten (USA).

# Ändern Sie die Sprache

Die Standardsprachen sind:

- Englisch;
- Italienisch;
- Spanisch;
- Deutsch;
- Französisch;
- Russisch;
- Vereinfachtes Chinesisch;
- Traditionelles Chinesisch.

# Weisen Sie der Einheit einen Namen zu

In diesem Abschnitt ist es möglich, den Namen der Einheit zuzuweisen/zu ändern. Der Name und die Seriennummer dürfen maximal 10 Zeichen lang sein.

Der Name der Einheit kennzeichnet die Nomenklatur der Dateien, die auf den USB-Stick heruntergeladen werden können.

DATE AND TIME	ATE AND TIME DATE AND TIME DELETE FAVOURTITE FOODS DELETE COURT AND TIME LANGUAGE WELCOME PAGE	**	20/01/2021 10:38

#### Lieblingsspeisen löschen, um sie zu behalten

Mit dieser Funktion können Sie alle Daten in der Liste **Lieblingsspeisen zum Aufbewahren** löschen. Zur Bestätigung des Vorgangs wird das Passwort abgefragt. Das Passwort ist **99**.

#### Willkommensseite

Durch die Aktivierung der Begrüßungsseite fordert der Controller Sie beim nächsten Neustart auf, einige Einstellungen vorzunehmen.

Die erforderlichen Einstellungen sind:

- Einheitenname;
- Datum und Uhrzeit;
- Gerätesprache;
- Temperaturmesseinheit.

# **ENERGIESPAREND / ÖKOLOGISCH**

Basierend auf der Konfiguration des Parameters **ESO** ist es möglich, die (Energy Saving)/ Eco-Funktion des Controllers durch Drücken der Taste 📎 von Home aus zu ändern.

Die möglichen Konfigurationen sind:

Par.	Beschreibung	UM	Range
ES0	Energiesparmodus. <b>0</b> = 1 Stufe (Behindert/Hohe Ersparnis); <b>1</b> = 3 Stufen (Deaktiviert/Geringe Ersparnis/Mittlere Ersparnis/Hohe Ersparnis).	num	0/1

# ESO = 0

# ZELLENLICHT

Von zu Hause aus können Sie das Handylicht ein- oder ausschalten. Das Einschalten des Zellenlichts hat Vorrang vor dem Mikroschalter der Tür: Wenn das Licht durch Drücken einer Taste eingeschaltet wird, hat das Öffnen/Schließen der Tür keine Auswirkung auf das Licht, das eingeschaltet bleibt, bis es anschließend durch Drücken der Taste ausgeschaltet wird Taste. Das Zellenlicht kann auch bei ausgeschaltetem Gerät ein-und ausgeschaltet werden.

# **MANUELLES ABTAUEN**

Wenn die erforderlichen Bedingungen vorliegen, ist es über das Menü möglich, eine manuelle Abtauung zu starten, indem die folgenden Schritte ausgeführt werden:

Wenn die für den Start einer manuellen Abtauung erforderlichen Bedingungen nicht vorliegen, erscheint auf dem Display folgender Bildschirm:

Manuelles Abtauen nicht möglich

# ALARM

Im Falle eines Alarmsignals erscheint auf dem Startbildschirm, wie im Beispiel unten, die Beschreibung (in Rot) des laufenden Alarms und gleichzeitig wird der Summer aktiviert (falls aktiviert).

Bei mehreren aktiven Alarmen wechseln sich diese im Home-Modus für jeweils 3 Sekunden ab.

Durch Drücken in der Nähe des Alarmsignals wird der Summer stummgeschaltet und der Controller wechselt automatisch zur aktiven Alarmliste.

>

# Liste der aktiven Alarme

Durch Drücken von Alarmliste gelangen Sie zum Bildschirm Aktive Alarme. Diese Liste enthält:

- Standardalarme (bei Ihrer Rückkehr werden sie nicht im Alarmverlauf gespeichert und aus der Liste der aktiven Alarme gelöscht);
- HACCP-Alarme (bei Ihrer Rückkehr werden sie im Alarmverlauf gespeichert).
- Vom allgemeinen Menü aus kann auf das Alarmmenü zugegriffen werden, wo Folgendes möglich ist:
  - Sehen Sie sich die Liste der aktiven Alarme an;
  - Sehen Sie sich den Alarmverlauf an;
  - Löschen Sie den Alarmverlauf.

# SPEZIELLE ZYKLEN

Die verfügbaren Spezialzyklen sind so konzipiert, dass der Benutzer die vollständige Kontrolle über die Kühlschränke oder-zellen hat.

Die verfügbaren Sonderzyklen sind:

- Kühlung;
- Kontinuierlicher Zyklus.

*
COOLING CONTINUOUS CYCLE

Während der Ausführung der **Kühlung Dauerzyklen** wechselt die Steuerung automatisch zum HOME-Bildschirm. Der laufende Zyklus wird im oberen Teil des Displays angezeigt. Durch Drücken in der Nähe der Anzeige des laufenden Zyklus kehren Sie zum Bildschirm für den Spezialzyklus zurück.

# Kühlung

Der **Kühlzyklus** wird verwendet, wenn das Kühlmöbel zum ersten Mal beladen wird. Der Controller startet einen Kühlzyklus des Schranks mit maximaler Leistung, bis der Sollwert erreicht ist oder bis die während der Zyklusstartphase eingestellte maximale Zeit abgelaufen ist.

Um während des Kühlzyklus die verbleibende Zeit anzuzeigen, kehren Sie zur Seite des Spezialzyklus zurück.

# Kontinuierlicher Zyklus

Der spezielle **kontinuierliche Zyklus** wird verwendet, um die Zelle abzukühlen, bevor Lebensmittel in die Zelle geladen werden. Der Regler startet einen Zyklus, der nur innerhalb der maximalen Zeit (einstellbarer Wert während der Zyklusstartphase) endet, während die Temperatur nicht geregelt wird.

Um während des kontinuierlichen Zyklus die verbleibende Zeit anzuzeigen, kehren Sie zur Seite des Spezialzyklus zurück.

# TEMPERATURGRAPH

Über das Menü kann auf die Funktion **Temperaturdiagramm** zugegriffen werden, wo die Grafik des Temperaturdatenloggers angezeigt werden kann.

Die Grafik stellt den Verlauf des Temperaturtrends der letzten 12 Probenahmen dar.

#### Legende zur Linienfarbe

- **Grüne Linie**: Zelltemperatur;
- Blaue Linie: Produkttemperatur;
- Gelbe Linie: Verdampfertemperatur;
- Rote Linie: Kondensatortemperatur.

Die X-Achse zeigt eine gepunktete vertikale Linie, die die Stichprobe anzeigt.

Auf der Y-Achse werden die ermittelten Minimal- und Maximalwerte angezeigt, sodass alle Daten auf dem Display angezeigt werden können.

# SERVICE

Über das **Servicemenü** ist es möglich, die **I/O**-Zustände anzuzeigen.

Im Abschnitt **Status der Eingänge – Ausgänge** ist es möglich, den Status der Eingänge (analog und digital) und Ausgänge (digital und analog) einzusehen. Es werden nur die Werte der per Parameter konfigurierten Ein- und Ausgänge angezeigt, die anderen nicht konfigurierten Ein- und Ausgänge werden mit "---" versehen.

# PARAMETERVERWALTUNG

Im Parameterverwaltungsmenü ist es möglich, die Parameter zu ändern oder alle Parameter auf die Werkswerte zurückzusetzen.

# Parameter einstellen

Um auf den Abschnitt **Parametereinstellungen** zuzugreifen, müssen Sie das Zugangspasswort eingeben (für Informationen wenden Sie sich an den Unternehmensservice). Sobald das Passwort eingegeben wurde, gelangen Sie zum Bildschirm **Parametergruppen**, in dem Sie die zu ändernde Parametergruppe auswählen können.

	MANAGEMENT			SETTINGS	0
PAR/ SE	(in) RESTORE PARAMETERS		ANALOGUE	DIGITAL	DIGITAL OUTPUTS
			COLD MANAGEMENT	HOT MANAGEMENT	HUMIDITY REGULATION
T the CA			- the co		2001 10:00
> PARAMETER :	SETTINGS			SETTINGS	2021 10.38
EVAPORATOR AND CONDENSER FAN	VARIABLE SPEED COMPRISOR PROTE	ESSOR CTION	SANITISING	GENERAL CONFIGURATION	AUTOMATIC TEST
	TEMPERATURE ECO\E	NERGY	SERIAL PORT		

#### Parameter wiederherstellen

Um die Parameter auf die Werkswerte zurückzusetzen, wählen Sie den entsprechenden Menüpunkt aus und geben Sie das Passwort ein (für Informationen wenden Sie sich an den Firmenservice).

# **ERWEITERTE FUNKTIONEN**

Im Abschnitt Erweiterte Funktionen können Sie:

- Führen Sie den Ausgabetest durch;
- Ein Testzyklus.

#### Ausgabetests

Im Abschnitt **Ausgangstest** ist es möglich, alle im Controller konfigurierten Ausgänge (digital/analog) zu aktivieren/deaktivieren unabhängig von der laufenden Anpassung.

In diesem Abschnitt ist es möglich, die laufende Anpassung manuell zu unterbrechen; Beim Verlassen des Menüs wird die Einstellung fortgesetzt automatisch den zuvor unterbrochenen Auftrag.

Jeder Ausgang kann einzeln aktiviert/deaktiviert werden.

#### Testzyklus

Im Abschnitt **Testzyklus** werden alle Lasten ausgeschaltet.

Der Testzyklus führt automatisch einen Testzyklus durch, der aus 7 Phasen besteht:

• Testzyklus starten: Berühren Sie die START-Taste;

Zelltemperaturschwelle für den Zyklusstart

IDer Zyklus startet automatisch, sobald Pb1 (Zellentemperatur) > T1;

Pulldown-Phase

Der Regler arbeitet im Kaltbetrieb, bis der Sollwert erreicht ist **T2**.

Der korrekte Anschluss der Sonden wird überprüft. §

Die Temperatur der Verdampfersonde muss niedriger sein als die Temperatur der Zelle, während die Temperatur der Der Kondensator muss höher sein als der der Zelle. Bei Nichtbestehen endet die Prüfung.

Die maximale Dauer des Tests wird durch **T7** bestimmt; Wenn der Test die **T7**-Zeit überschreitet, wird die Meldung angezeigt **MAX TIME** und der Test endet.

## Thermostatisierungsphase

Diese Phase arbeitet mit Sollwert (**T3**) und Hysterese (**T4**). Während dieser Phase führt der Kompressor mehrere **T5-**Zyklen durch, bevor er in die Abtauphase übergeht. **HINWEIS:** Mit Zyklen ist die Zeitspanne der EIN-Phase und AUS-Phase des Kompressors gemeint.

#### Auftauphase

Sobald die Thermostatisierungsphase abgeschlossen ist, startet der Regler eine Zwangsabtauung (bestimmt durch die Parameter des auftauen).

Wenn der Abtauzyklus nach Ablauf der Zeit endet, wird die Schrift **DEFR angezeigt. TIME** (Auftauen nach Zeit) und der Test endet.

# Erholungsphase

TSobald die Abtauung abgeschlossen ist, wartet der Regler darauf, dass die Zellentemperatur den T6-Sollwert erreicht.
Testtest abgeschlossen

Der Controller schaltet alle Lasten ab und bleibt auf der Abnahmetestseite und zeigt die erhaltenen Ergebnisse an.

# Entsorgung

Das Abklemmen der Stromversorgung und der Wasserzufuhr muss durch qualifizierte Techniker erfolgen. Falls vorhanden, müssen ordnungsgemäß entsorgt werden:

- Kühlgas;

- in den Hydraulikkreisläufen vorhandenen Frostschutzmittel,

Diese dürfen nicht in die Umwelt gelangen.

Gemäß den Bestimmungen von § 13 des ital. Gesetzerlasses Nr. 49 des Jahres 2014 "Umsetzung der EU-Richtlinie RAEE 2012/19 zu elektrischen und elektronischen Altgeräten"

Die Kennzeichnung mit der durchgestrichenen Mülltonne zeigt an, dass das Produkt nach dem 13. August 2015 in den Markt eingeführt wurde und, dass es nicht als Haushaltsabfall entsorgt werden darf, sondern separat entsorgt werden muss.

Alle Geräte bestehen zu mehr als 90 % des Gewichts aus recycelbare Metallen (Edelstahl, Eisen, Aluminium, verzinktes Blech, Kupfer usw.).

Machen Sie das Gerät für die Entsorgung unbrauchbar, indem Sie die Stromversorgung und alle Schließvorrichtungen (falls vorhanden) entfernen.

Bei der Entsorgung des Geräts muss darauf geachtet werden, dass negative Umweltauswirkungen vermieden werden und, dass die Ressourcen geschont werden, durch Anwendung des Prinzips "Wer verschmutzt, zahlt" sowie durch Vorbeugung, Vorbereitung zur Wiederverwendung, Recycling und Verwertung.

Die unsachgemäße Entsorgung des Produkts führt zur Anwendung der von den geltenden gesetzlichen Bestimmungen vorgesehenen Sanktionen.

#### Informationen zur Entsorgung in Italien

In Italien müssen RAEE-Geräte wie folgt entsorgt werden:

- durch Sammelstellen (auch Öko-Inseln oder Öko-Plattformen genannt)
- durch den Händler, bei dem ein neues Gerät erworben wird (Rücknahme "eins zu eins");

#### Informationen zur Entsorgung in Ländern der europäischen Union

Die EU-Richtlinie zu Geräten (RAEE) wurde in jedem Land auf andere Weise umgesetzt und daher empfehlen wir Ihnen, sich für die ordnungsgemäße Entsorgung des Geräts an die zuständige lokale Behörde oder den Händler zu wenden.

Bis zur Entsorgung kann das Gerät auch provisorisch im Freien gelagert werden, vorausgesetzt, Strom-, Kühl- und Wasserkreisläufe sind unbeschädigt und verschlossen. Stellen Sie außerdem sicher, dass die Türen nicht verschlossen werden können, um Einschließungen zu vermeiden.

Die gesetzlichen Umweltschutzbestimmungen im Land der Benutzung müssen in jedem Fall beachtet werden.

# Funktionsstörungen

Falls das Gerät nicht funktioniert oder falls funktionelle oder strukturelle Veränderungen festgestellt werden:

- Unterbrechen Sie die Stromversorgung und die Wasserzufuhr;
- Konsultieren Sie folgende Tabelle und überprüfen Sie die vorgeschlagenen Lösungen.

Wenden Sie sich an den Vertragskundendienst des Herstellers, falls in der Tabelle keine Lösung enthalten ist; dabei müssen angegeben werden:

- die Natur des Defekts;
- die Artikelnummer und die Seriennummer des Geräts, die auf dem Typenschild angegeben werden.

Verlangen Sie für die Reparatur originalersatzteile: Der Hersteller übernimmt keinerlei Haftung, falls Ersatzteile von Drittanbietern verwendet werden.

Um sicherzustellen, dass sich das Gerät in einem perfekten Nutzungs- und Sicherheitszustand befindet, empfehlen wir, es zu mindest einmal jährlich durch den

Vertragskundendienst warten zu lassen.

Typ des Problems	Vor der Kontaktaufnahme mit dem Kunden- dienst überprüfen, ob
das Gerät vollständig ausgeschaltet ist.	elektrische Spannung in der Anlage vorhanden ist und der Netzstecker nicht herausgezogen worden ist.
Das Gerät kühlt nicht ausreichend	<ul> <li>kein Einfluss durch eine externe Wärmequelle vorhanden ist;</li> <li>die Türen perfekt geschlossen sind;</li> <li>der Filter des Kondensators verstopft ist;</li> <li>die frontalen Lüftungsöffnungen von Gegenständen oder Stab verstopft sind;</li> <li>die Lebensmittel im Inneren der Zelle gut verteilt sind und die Zirkulation der Luft im Inneren der Zelle nicht beeinträchtigen;</li> <li>das Gerät nicht mit Lebensmitteln überladen ist (halten Sie die Anweisungen zur Beladung des Geräts in Ihrem Besitz ein).</li> </ul>
Das Gerät ist sehr laut	<ul> <li>keine Kontakte zwischen dem Gerät und anderen Gegenständen oder Maschinen vorhanden sind;</li> <li>das Gerät perfekt nivelliert ist;</li> <li>die sichtbaren Schrauben gut festgezogen sind.</li> </ul>

Versuchen Sie nicht, das Gerät selbst zu reparieren; dies können zu schweren Schäden für Personen, Tiere und Gegenstände führen und führt zum Verfall des Gewährleistungsanspruchs.

Fordern Sie einen Eingriff des Vertragskundendienstes des Herstellers an und verlangen Sie Originalersatzteile.

# Garantie

Die Gewährleistungspflicht des Herstellers für Geräte und Bauteile aus seiner Produktion hat eine Dauer von einem Jahr ab dem Rechnungsdatum und sie besteht in der kostenlosen Lieferung von Bauteile, die nach seinem unanfechtbaren Urteil ausgetauscht werden müssen.

Der Hersteller wird die eventuellen Mängel beheben, vorausgesetzt, das Gerät wurde unter Beachtung der Anweisungen im vorliegenden Handbuch installiert und benutzt. Aus der Garantie ausgeschlossen sind Schäden durch Kalkverkrustungen, Überspannung oder Eingriffe durch Unbefugte.

Die Verbrauchsteile wie Scheiben, Bauteile mit ästhetischer Funktion, Dichtungen, Lampe und Verschleißteile sind aus der Garantie ausgeschlossen.

Während des Garantiezeitraums gehen die Arbeits-, Reise- und Transportkosten für die gegebenenfalls auszuwechselnden Geräte und Bauteile zu Lasten des Auftraggebers.

Die im Rahmen der Garantie ausgewechselten Materialien bleiben unser Eigentum und müssen auf Kosten des Auftraggebers zurückgeliefert werden.

# **User Manual**

# Bakery / Cream Cabinet NC41PII

[Art. 474600400611]

# Congratulations on having purchased our equipment!

Work is simpler due to the intuitive user interface graphics, designed to simplify function access, that are displayed to be immediately identified and promote user and device interaction.

A concentration of technology in a single equipment allowing to perform different and complementary activities for the best efficiency in the kitchen.

This manual furnishes all necessary information necessary for correct device use and appropriate maintenance. Read the instructions carefully before any operation, as they provide essential indications concerning the device safety state.

The manufacturer declines all responsibility for any unintended use of the product. Original language: Italian. The manufacture responsible for any transcription or translation mistakes.

# SAFETY INSTRUCTIONS

# Safety instructions for use

- Use and cleaning other than those indicated and foreseen in this booklet are considered improper and can cause damages, injuries or fatal accidents, null and void the warranty and hold the manufacturer harmless from any liability.
- Read this manual carefully before using the equipment and maintenance and keep it for any further future consultation by the various operators.
- In the event that the equipment is transferred, give this manual to the new user.
- Use is solely reserved to appropriate and trained personnel who attend periodic refresher courses.
- Keep away from electrical parts with wet hands or bare feet.
- IT ISabsolutely forbidden to tamper with or remove the supplied safety devices (protective grids, danger stickers, etc...). The manufacturer declines all responsibility if the above instructions are not followed.
- Do not insert screwdrivers or other objects between guards (fan guards, evaporator guards, etc.).
- For good compressor and evaporator unit operations, never obstruct the air vents.
- In the event of fire, do not use water. Install a CO<sub>2</sub> (carbon dioxide) extinguisher and cool the motor compartment as quickly as possible.

# Correct equipment use

- This equipment is considered a food processing machine (Regulation (EC) No 1935/2004), intended for the processing of food products in industrial and professional kitchens. It is not suitable for the storage of pharmaceutical, chemical or any other non-food product.
- The following instructions must be followed for best equipment performance:
  - Do not place hot food, uncovered liquids, live animals, various objects or corrosive products in the equipment.
  - Package or otherwise protect food especially if they contain aromas or spices.
  - Arrange foodstuffs inside the equipment to avoid limiting air circulation, avoiding placing paper, cardboard, cutting boards, etc- that can hinder air passage on the racks.
  - Avoid frequent and prolonged door opening as much as possible.
  - If the door was opened, wait a few seconds before re-opening it.
  - Gradually arrange food starting from the bottom up; vice versa, remove food starting from the top down.
- Refrigerators have been made and designed with the proper shrewdness to guarantee user's health and safety and do not have hazardous corners, shape surfaces or protruding elements from the specified areas. Their stability is guaranteed even when the doors are open; however, it is forbidden to hang on to the doors.
- Failure to follow these instructions could cause damages and injuries, even fatal, and null and voids the warranty.

# In the event of equipment malfunctions...

- If the equipment does not work or functional or structural alterations are noted, disconnect it from the power and water mains and contact a service centre authorised by the manufacturer without attempting to repair it on your own. The use of original spare parts is recommended. The manufacturer declines all responsibility for the use of non-original spare parts.
- To ensure that the device is in perfect use and safety conditions, we recommend you have it maintained and serviced by an authorised service centre at least once a year.

# $\land$

# Risks associated with equipment use

- RISKS DUE TO MOVING ON WHEELS: if the equipment is fitted with wheels, be careful not to push the equipment roughly when moving to prevent it from tipping over and being damaged, also pay attention to any unevenness of the sliding surface. The equipment fitted with wheels cannot be levelled, so make sure that the supporting surface is perfectly horizontal and flat. Always lock the wheels with the appropriate catches.
- RISKS DUE TO TIPPING OVER: the cabinet, once positioned, must be locked with special clamps as the weight of the door tends to list it to the right with the risk of tipping over. If the cabinet is placed on wheels, it is not possible to anchor it; therefore, we recommend to pay **the utmost attention** when opening the door, especially if the equipment is empty.
- RISKS DUE TO MOBILE ELEMENTS: the only mobile element is the fan but does not constitute any risk since it is protected by a protection grate secured with screws.
- RISKS DUE TO LOW/HIGH TEMPERATURES: stickers marked "TEMPERATURE HAZARD" were affixed near areas with low/high temperature risks.
- RISKS DUE TO ELECTRICITY: risks of electrical nature were resolved by designing electrical systems as per regulations CEI EN 60335-1. Special "high voltage" stickers identify areas with electrical hazards.
   Noiselevels lower than 70 dB
- Noiselevels lower than 70 dB.
- Be careful not to get your fingers jammed when closing the door.
- When the door is open,, the dashboard protrudes from the machine's dimensions; for this reason, be careful not to hit your head.
- The handle protrudes from the machine's overall dimensions; pay attention to possible impacts.

# **Correctly loading the equipment**

Food should be placed in a single layer in containers:

- uncovered;
- food-safe;
- resistant to low temperatures;

Containers should be **evenly placed** inside the cell.

Correct container placement will permit free air circulation in the cell: avoid obstructing the air vents and overloading the equipment over the admissible limits.

# vertication of the second seco

# **Door lock**

The door opening can be locked by acting on the lock placed on the dashboard.

# **Cloud Connection**

If the customer has requested a Cloud subscription, the machine must be connected to the network via an Ethernet cable. The socket is located in the board located in the back of the dashboard.

Do not touch the display with ladles and other objects, but only with your hands or any pens suitable for touch screens.

# Ordinary cleaning of the equipment

BEFORE PERFORMING ANY MAINTENANCE, CUT OFF THE POWER SUPPLY TO THE MACHINE AND WEAR SUITABLE PERSONAL PROTECTION EQUIPMENT (E.G. GLOVES, ETC.).

USERS MUST CARRY OUT ONLY ROUTINE MAINTE-NANCE OPERATIONS (I.E. CLEANING). FOR EXTRAOR-DINARY MAINTENANCE, CONTACT A SERVICE CEN-TRE AND ASK FOR THE ASSISTANCE OF AN AUTHORISED TECHNICIAN.

THE WARRANTY IS NULL AND VOID IN THE EVENT OF DAMAGES DUE TO NEGLIGENT OR INCORRECT MAINTENANCE (E.G. USE OF UNSUITABLE DETER-

GENTS).

BEWARE OF HOT BODIES WHEN PERFORMING MAIN-TENANCE AND CLEANING ON THE ENGINE.

BEWARE OF SHARP EDGES ON SLOTTED CONVEY-ORS, ON THE CONDENSER COIL (THE FINS ARE PRO-TECTED BY A FILTER), ON THE MOTOR SUPPORT BASE (HOLES) AND ON THE SLOTS IN THE DASHBOARD.

To clean any component or accessory, DO NOT use:

- abrasive or powder detergents;
- aggressive or corrosive detergents (e.g. hydrochloric/muriatic or sulphuric acid, caustic soda, etc.). Attention! Do not use these substances to clean the floor underneath the appliance;
- abrasive or sharp tools (e.g. abrasive sponges, scrapers, steel brushes, etc.);
- steamed or pressurised water jets.

At first use wash the trays and chamber using a cloth dampened with hot soapy water and end with rinsing and drying. To remove processing waste, run the equipment off-load for approximately 30 minutes.

# **External steel surface cleaning**

Use a cloth dampened with hot soapy water or specific products for steel. End with rinsing and drying.

# Equipment chamber cleaning

Daily clean the equipment chamber to maintain high levels of hygiene and equipment performance.

Always use a cloth dampened with hot soapy water and end with rinsing and drying.

maintenance of the equipment H\_0

# **TOUCH KEYS**

The touch key functions are described below:

Keys	Tap and release to
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~	Access the temperature data-logger chart
-`Ò	Switch the cold room light on/off
	Access the menu
Q	Enable/disable energy saving mode

# USING THE CONTROLLER

# **Controller ON/OFF**

To switch the controller on or off, proceed as follows:

#### Power on

# **Power off**

**NOTE:** By switching on/off we mean switching from STANDBY to ON and vice-versa. While the controller is in standby, tap *\$*; the light will come on.

# Accessing and using the menu

The menu key on the Home screen is used to enter the menu offering access to the main functions used to configure and manage the device. To move on to the next page, tap for  $\ge$  .

The menu can be used to access the following functions:

- Switch off the device;
- Start manual defrost;
- View active alarms and/or event log;
- Access the lists of food to store (pre-set and favourites);
- Access special cycles;
- · Access general settings, advanced functions and parameter management;
- Service menu;

# DATA LOG

In the **data log** menu, you can view:

- Compressor counter log;
- Defrost log;
- Door open log;
- Setup log;
- Delete data log

#### Compressor counter log

- Total hours of machine operation;
- Total hours of compressor operation;
- Average compressor ON time;
- Average compressor OFF time;
- Percentage daily on time;
- Percentage compressor on time in the last hour.

#### **Defrost** log

- Report of the last 30 defrost cycles:
- Defrost type;
- Defrost start date and time;
- Defrost duration.

#### Door open log

- Report of the last 30 door open events:
- Total number of door open events;
- Number of door open events that triggered a door open alarm;
- Total door open time.

#### HACCP.CSV FILE configuration

• Enable/disable data to be stored in the log.

#### Delete log

• Delete one or more data groups individually or delete all data.

# **GENERAL SETTINGS**

The general settings of the controller can be used to:

- Change the date and time; ٠
- Change the language; •
- Assign a name to the unit; •
- Add a welcome page; .
- Delete the list of favourite food .

<b>〈</b> * �	奈	2021 10:38

9

Change Date and Time

You can choose a format, by tapping #:

- Europe (EU); •
- United States (USA). •

# Change language

The default languages are:

- English;
- Italiano (Italian);
- Spanish;
- German;
- French;
- Russian;
- Simplified Chinese;
- Traditional Chinese.

#### Assign a name to the unit

In this section you can assign a name to the unit, or change an existing name. The name and the serial number can be up to 10 characters long.

The name of the unit features in the naming convention of the files that can be downloaded onto the USB stick.

\$\$ \$\$	<b>20/01/</b>	2021 10:28

# USE

# **ENERGY SAVING / ECO MODE**

Depending on the configuration of parameter **ESO**, you can adjust the Energy Saving/Eco function of the controller by pressing  $\bigotimes$  on the Home screen.

Possible configurations are:

Par.	Description	MU	Range
ES0	Energy saving mode. <b>0</b> = 1 level (Disabled/High saving); <b>1</b> = 3 levels (Disabled/Low saving/Medium saving/High saving).	num	0/1

# ESO = 0

# **COLD ROOM LIGHT**

You can switch the cold room light on or off from the Home screen. Switching on the cold room light takes priority over the door switch: if the light is switched on via key, opening and closing the door will have no effect on the light, which remains on, until it is switched off with the key. The cold room light can also be switched on/off even when the instrument is OFF.

# MANUAL DEFROST

In the required conditions, a manual defrost can be launched from the menu. Proceed as follows:

# USE

If the conditions are not as required for a manual defrost, the following screen appears on the display:

Manual defrost not possible

# ALARMS

In the event of an alarm indication, the description of the current alarm appears in red on the home screen (as in the example below) and the buzzer sounds (if enabled).

If there are several active alarms, they alternate on the home screen, each appearing for 3 seconds at a time.

Touch the screen next to the alarm indication to silence the buzzer; the controller will automatically switch to showing the list of active alarms.

# Active alarm list

Press Alarm list to access the active alarms screen. This list includes:

- Standard alarms (on resetting they are not saved in the alarm log and are deleted from the list of active alarms);
- HACCP alarms (on resetting they are saved in the alarm log).

The alarms menu is accessed from the general menu, and can be used to:

- View the active alarm list;
- View the alarm log;
- Delete the alarm log.

<b>桊</b> 優 <i>拉</i> []]	⊕ ङ़ 20/0	1/2021 10	:38 am	
-1	<b>4.C</b>	)° -2(	).5°	
Ø		-ÿ-	ዯ	

# Delete alarm log

To delete the alarm log:

# **SPECIAL CYCLES**

The device offers special cycles designed to allow the user full control of refrigerated cabinets or cold rooms. The special cycles available are:

- Cooling;
- Continuous cycle;

While the **Cooling** and **Continuous cycle** are taking place, the controller automatically shows the HOME screen. The cycle in progress is shown at the top of the display. Touch the screen next to the cycle in progress indication to return to the special cycle screen.

# Cooling

The **Cooling** cycle is used when the refrigerated cabinet is loaded for the first time. The controller runs a cabinet cooling cycle at maximum power until the setpoint is reached, or until the maximum time set during the cycle startup phase has elapsed.

During the **Cooling** cycle, to view the remaining time, return to the special cycle screen.

# **Continuous cycle**

The **Continuous cycle** special cycle is used to pre-chill the cold room before foods are placed inside.

The controller starts a cycle which will only end due to the maximum time period being reached (this value can be set during cycle startup), while the temperature is not checked.

During the **Continuous cycle**, to view the remaining time, return to the special cycle screen.

# **TEMPERATURE CHART**

The Temperature chart which can be used to view the temperature data-logger chart can be accessed via the menu.

The chart shows the temperature trends over the last 12 samples.

#### Key to line colours

- Green line: Cold room temperature;
- Blue line: Product temperature;
- Yellow line: Evaporator temperature;
- **Red line:** Condenser temperature.

The X-axis shows a vertical dotted line indicating sampling.

The Y-axis shows the minimum and maximum values detected, so as to show all the data within the display.

# SERVICE

The Service menu can be used to view I/O status.

In the **Input-output status** section, you can consult the status of the inputs (analogue and digital) and outputs (digital and analogue). Only the values for the inputs and outputs configured via parameters are shown; other non-configured inputs and outputs will be followed by "---".

$\downarrow$	
INPUT / OUTPUT STATUS	

# **PARAMETER MANAGEMENT**

The Parameter management menu can be used to edit parameters, or to restore all parameters to their factory values.

#### **Parameter settings**

To access the **Parameter settings** section, you must enter the access password (for more information, contact the company service). Once you have entered the password, you can access the **Parameter groups** screen, where you can select the group of parameters you wish to edit.

**	20 /01 /2021 10:38			20/01/2	n21 10:38
	ANAGEMENT		→ PARAMETER SE	TTINGS	
PAR	(M) RESTORE PARAMETERS		ANALOGUE	DIGITAL INPUTS	DIGITAL OUTPUTS

<b>&lt;</b> ₩⊛	20/01/2021 10:38	ù.	<b>∭</b>	奈	021 10:38
A > PARAMETER SE	TTINGS			TTINGS	
EVAPORATOR AND CONDENSER FAN	VARIABLE SPEED COMPRESSOR COMPRESSOR PROTECTION		SANITISING	GENERAL CONFIGURATION	AUTOMATIC TEST
DEFROSTING	TEMPERATURE ECOIENERGY ALARMS SAVING		SERIAL PORT CONFIGURATION		

#### **Restore parameters**

To restore the parameters to their factory values, select the corresponding entry in the menu and enter the password (for more information, contact the company service).

# **ADVANCED FUNCTIONS**

The Advanced Functions menu can be used to:

- Test the outputs;
- Run a test cycle.

#### **Output test**

In the **Output test** section, you can activate/deactivate all outputs (digital/analogue) configured on the controller, regardless of the regulation currently taking place.

In this section, you can manually pause the regulation currently taking place; on exiting the menu, regulation resumes the paused task automatically.

Each output can be activated/deactivated individually.

#### Test cycle

All loads are switched off in the **Test cycle**.

The test cycle function automatically performs a test cycle consisting of 7 phases:

• Start test cycle: Tap START;

Cold room temperature for cycle start

The cycle starts automatically as soon as Pb1 (cold room temperature) > T1;

#### Pulldown phase

The controller runs in cold mode until setpoint **T2** is reached.

Correct probe connection is checked. §

The temperature of the evaporator probe should be lower than the temperature of the cold room, while the temperature of the condenser should be higher than that of the cold room. If it is not exceeded, the test ends.

The maximum Test duration is determined by **T7**; if the Test exceeds the time period **T7**, the text **MAX TIME** appears and the test ends.

#### Thermostat control phase

This phase runs with a Setpoint (**T3**) and Hysteresis (**T4**). During this phase, the compressor performs a number of cycles **T5** before moving on to the Defrost phase. **NOTE**: by cycles we mean the compressor ON phase and OFF phase time.

#### • Defrost phase

•

Once the Thermostat control phase has ended, the controller runs a forced defrost (determined by the defrost parameters).

If the defrost cycle ends due to Time, the text **DEFR. TIME** appears and the test ends.

#### **Recovery phase**

Once defrosting has ended, the controller waits for the temperature of the cold room to reach the setpoint T6.

#### Test complete

The controller switches off all loads and remains on the test screen, showing the results.

# Touch screen cleaning

Use a cloth just soaked in a specific product for the crystals following the instructions of the manufacturer of the detergent. Do not spray too much product to avoid infiltrations that could damage the display.

# Slot and grill/sponge cleaning

Keep vents free of obstructions and dust cleaning them often with a normal vacuum or brush.

Periodically it is recommended to lift the front panel by removing the screws below and vacuum the dust accumulated on the condenser fan. Lifting the panel also gives access to the condensation water collection tray between the condenser and the compressor.Inside it, there is a "GM" metal grill that acts as a sponge and absorbs water, increases the exchange surface and facilitates the evaporation of condensation water; this "grill/sponge" must be regularly removed and cleaned with soap and water or in the dishwasher.

# **Filter cleaning**

On the right side of the condenser there is a "FL" filter held in place by two metal clips. Periodically remove it and wash it with soap and water. After waiting for it to dry completely, put it back in place. Do not use the machine without a filter.

# Disuse

During periods of inactivity, disconnect the power and water supply (if any). Protect external steel equipment parts wiping them down with a soft cloth slightly dampened with Vaseline oil. Leave the door ajar to guarantee correct ventilation.

- Before resuming operations: - accurately clean the equipment and accessories;
- reconnect the equipment to the power and water mains (if
- any); - inspect the equipment before using it;
- restart the equipment for at least 60 minutes without any food inside.

To ensure that the device is in perfect use and safety conditions, we recommend you have it maintained and serviced by an authorised service centre at least once a year.

own

dashboard

not stay up on its

the

does

# Disposal at end working life

Only qualified personnel can disconnect the machine from the electrical and water mains.

If applicable, recovery and correctly dispose:

- coolant gas;

- anti-freeze solutions in the hydraulic circuits,

avoiding spills or disposal in the environment.

As per Legislative Decree no. 49 art. 13 dated 2014 "Implementation of WEEE Directive 2012/19/EU on electric and electronic waste"

The barred bin marking specifies that the product was released onto the market after August 13, 2015 and should not be assimilated with other waste at the end of its working life but disposed of separately. All equipment is made of recyclable metallic materials (staipless steel iron, aluminium, galvanised sheet metal, copper, etc.)

All equipment is made of recyclable metallic materials (stainless steel, iron, aluminium, galvanised sheet metal, copper, etc-) in percentages over 90% in weight.

Put the equipment out of order for disposal removing the power cord and any compartment or chamber lock devices (where applicable).

Pay attention to managing this product at the end of its working life, reducing negative impacts on the environment and improving resource use efficiency, applying the "who pollutes pays", prevention, reuse, recycling and recovery preparation principles. Please remember that illicit or incorrect product disposal is punishable by law.

#### Information on disposal in Italy

WEEE equipment in Italy must be delivered to:

- Collection centres (also called ecological islands or platforms)
- the dealer where new equipment is purchased who must withdraw it free of charge ("one to one" withdrawal);

#### Information on disposal in European Union countries

The Community Directive on WEEE equipment was assimilated in different ways in each country. Therefore we suggest you contact your local authorities or Dealer to request the correct disposal method.

Awaiting dismantling and disposal, the equipment can be temporarily stored even outdoors, provided the electrical, refrigeration and hydraulic circuits are integral and closed. Also make sure that the doors cannot be closed to prevent entrapment. Follow the environmental protection laws in the user's country.

# Malfunctions

If the equipment does not work or functional or structural alterations are noted:

- disconnect it from the power and water mains;

- consult the table below to check the proposed solutions;

If the solution is not found in the table, contact a manufacturer's authorised service centre communicating:

- the nature of the defect;
- the equipment code and serial number found on its specification plate.

Require original spare parts for repairs: the manufacturer cannot be held liable and null and voids the warranty in the event non original spare parts are used.

To ensure that the appliance is in perfect use and safety conditions, we recommend you have it maintained and serviced by an authorised service centre at least once a year.

Problem type	Before contacting a service centre, check that
The device is fully off.	the system is powered and the plug is not disconnected.
The equipment does not cool enough	<ul> <li>it is not effected by an external heat source;</li> <li>the doors are fully shut;</li> <li>the condenser filter is not clogged;</li> <li>the front air vents are not obstructed by objects or dust;</li> <li>food is well distributed in the cell and do not obstruct ventilation in the cell;</li> <li>the equipment is not overloaded with food (follow your equipment load instructions).</li> </ul>
The equipment is very noisy	<ul> <li> there are no contacts between the equipment and any other object or machine;</li> <li>the equipment is perfectly levelled;</li> <li>visible screws are well-tightened.</li> </ul>

Do not attempt to repair the equipment on your own. This could cause serious damages to humans, animals and property and null and voids the Warranty.

Always request service by a service centre authorised by the manufacturer and request ORIGINAL spare parts.

# Warranty

The manufacturer's warranty on the equipment and its parts regarding its production is for 1 year, from invoice date, and consists in the free supply of parts to be replaced which, at is sole discretion, are defective.

The manufacturer will take care to remove any faults and defects provided that the equipment has been installed and used correctly in accordance with the instructions given in the manual. The warranty does not cover damage caused by limescale deposits, overvoltage or tampering by unauthorized or unqualified persons.

Consumables such as glass, aesthetic parts, gaskets, lamps and other parts consumed during use are not covered by the warranty. Labour, travel or missions, part transport and any other expenses for equipment to be replaced are at the purchaser's expense during the warranty period.

Material replaced under the warranty remain our property and must be returned at the purchaser's expense.

# Description of columns in the Table of Parameters

- **Par**.: List of configurable device parameters;
- **Descrizione**: Indicates parameter operation and any possible selections;
- **MU**: Measurement unit relating to the parameter;
- Range: Describes the interval of values that the parameter can assume. This can be correlated with other instrument
- parameters (indicated with the parameter code).

	<b>4</b> = 2 speed fans with 2 relays (with one output <b>u1c u13c</b> = 3 and <b>u1c u13c</b> = 11).		
	Output configuration 010 V.		
	0 = Disabled:		02
E14	1= Evaporator fan (E13=2)		
	2 Variable speed compressor (parameterVC3)		
	Enable users.		
E18	0= Disabled;		0/1
	1= Enabled.		-
E19	Enabling additional modules		1
	0= None;		
	1= Expansion module only:		03
	<b>2</b> = Backup module only;		
	<b>3</b> = Expansion module + backup.		
E20	Minimum Battery Voltage.	V	8.012.0
E21	backlight "eco" percentage	%	10100%
E22	time-out for "eco" backlight activation	s	1300
E23	Presence of EVCO inverter		0/1
